

## Armadio rack 22"

### General Specifications

Rack cabinets for networks, specific to house active and passive components for 19 "networks, simplify cable management and ensure adequate ventilation, even in the case of high density of internal components typical of current installations.

Both height-adjustable feet, to level the wardrobe, and wheels are included.

Made of sheet steel with strong load capacity, powder coated.

The cabinet can be disassembled with the Allen key included, in case it needs to be disassembled in whole or in part to facilitate transport, the reassembly diagram is included.

Front door in safety glass in steel structure with key lock with handle lock. The front and rear doors are reversible, so you can have the opening to the right or left according to your needs.

Full metal back door with lock.

Removable side sections with key lock.

4 Depth adjustable front and rear 19 "uprights. Each upright unit is numbered to simplify component assembly.

Possibility of entry of network cables from the top of the cabinet or from the base.

The base has 7 closable openings for accessing cables from different positions.

Included 20 screw kits for device mounting and grounding.

Roof prepared for ventilation units, and along the upper and lower edges of the cabinet there are slots for passive ventilation.

During transport, the cabinet is fixed on a pallet with blocks to make transport safer and protect the feet during transport.

Wide range of accessories available.

Load capacity 800 kg.

Color: black, RAL9005

Tested in accordance with EN55022: 2010 EN55024: 2010 EN61000-3-2: 2014 EN61000-3-3: 2013 standards.
